
Note: The eight most and eight least agenda-exposed NAICS3 industries with at least eight S&P 500 firms, 1992–2026. Each firm contributes one observation: its mean standardized relevance (z within topic and filing-length decile) across all 111 frozen codebook topics and all of its 10-K filings. Bars are industry means; whiskers are 95% confidence intervals across firms. Positive values: the industry's Item 1 language sits closer to the House Science and Senate Commerce hearing agenda than the typical S&P 500 firm's.
