
Note: 1,697 matched hearings, House Science and Senate Commerce committees, 1996–2021. Similarity is cosine similarity in the BAAI/bge-large-en-v1.5 embedding space between the hearing's extracted topic and each CAP category description; the taxonomy is the frozen Track-1 codebook v1.0 (111 topics, 14 themes). If extraction were random, every bar would sit at the dashed red line (5% per bin); instead 63% of hearings fall in the top bin — the human's category is, at the median, rank 5 of 213.
