
Note: 1,697 matched hearings, House Science and Senate Commerce committees, 1996–2021. Similarity is cosine similarity in the BAAI/bge-large-en-v1.5 embedding space between the hearing's extracted topic and each CAP category description; the taxonomy is the frozen Track-1 codebook v1.0 (111 topics, 14 themes). With one guess our topic finds the human's code for 27% of hearings, against 9% for the frequency rule; the gap persists at every k.
