
Note: Step 2 measure for the same four topics and the same records. Every record was read against its cited sentences and coded for direction, whether it favors more or less of the topic's policy object (stronger environmental regulation or a stronger EPA; more support for renewable energy; stronger privacy protection; expanding nuclear energy), in a single assistant coding pass (Claude, 2026-10-22) with no human review yet. Net direction = (records favoring more - records favoring less) / records with a direction; records with no stance, no clear direction, or off-topic are left out. Administrations are calendar-year blocks (Bush 2001-2008, Obama 2009-2016, Trump 2017-2020, Biden 2021-2024, Trump 2025); vertical lines mark the changes.
